HEXADIGITALL CORE TRACK SERIES

DevOps Engineering & Cloud Infrastructure

The definitive hands-on textbook for the Hexadigitall DevOps Engineering Core Track. Twenty intensive weeks of theory, labs, assessments, and real-world capstone projects that build production-grade skills from day one.

- CI/CD pipeline design with GitHub Actions, Jenkins & ArgoCD
- Container orchestration with Docker & Kubernetes
- Infrastructure as Code: Terraform & Ansible at scale
- Cloud architecture on AWS, GCP & Azure
- Observability: Prometheus, Grafana, ELK, Jaeger
- DevSecOps, SRE principles & FinOps cost optimisation
- 20 curated weekly labs + capstone sprint project

For software engineers, cloud practitioners, and IT professionals ready to advance into senior DevOps and platform engineering roles.
